

ANWAR UL HAQ

Full-Stack Developer & AI SaaS Builder

Jammu & Kashmir, India
sayedanwarulhaq@gmail.com
exam-os.in

Versatile Full-Stack & AI Engineer with hands-on experience building web platforms, mobile applications, and autonomous Micro-SaaS products. Skilled in Next.js, React, Node.js, Express, Flutter, Web Scraping, and AI integration (RAG & LLM workflows). Proactive indie hacker with a strong focus on writing custom, self-coded architecture end-to-end.

CORE PROJECTS & MICRO-SAAS

Exam-OS

[exam-os.in](#)

Founder & Full-Stack Architect

- Designed, built, and launched a comprehensive digital exam platform for student preparation.
- Engineered highly interactive client components using Next.js, React, and custom CSS libraries.
- Integrated Node.js backend infrastructure to manage user data, real-time tests, and analytics dashboards.

Micro-SaaS Product Portfolio

Self-Launched

Indie Hacker & Creator

- AI SaaS Applications:** Conceived and built specialized web utilities leveraging LLMs for automated generation and workflow optimization.
- Autonomous Architecture:** Integrated dynamic user authentication, database management, and cloud APIs.

Self-Driven Developer Mindset

I take full ownership of projects from writing clean backend scripts and dynamic frontends to setting up data scraping pipelines and deploying AI systems.

TECHNICAL STACK

FRONTEND ENGINEERING

Next.js React.js JavaScript

Tailwind CSS HTML5/CSS3

BACKEND & MOBILE

Node.js Express.js Flutter

REST APIs

AI & DATA SCRAPING

AI SaaS RAG Workflows Web Scraping

LLM Integration

EXECUTION MODEL

Self-Coded Logic Micro-SaaS

Deployment

⚡ TECHNICAL DEPTH & ENGINEERING FOCUS

Web Scraping & Data Automation

Core Skill

Custom Automated Data Collection Systems

- Engineered robust web scraping engines to extract structured data from diverse external websites and API endpoints.
- Handled pagination, session persistence, dynamic content loading, and anti-bot mitigation strategies.
- Transformed unorganized raw web data into clean JSON schemas for database storage and downstream AI processing.

RAG (Retrieval-Augmented Generation) & AI Integration

Emerging Expertise

Intelligent Document & Context Retrieval

- Developed foundational RAG workflows to connect LLM APIs with custom external knowledge bases.
- Implemented vector embeddings and semantic search logic to fetch contextually relevant chunks for precise AI responses.
- Focused on reducing hallucination and delivering accurate domain-specific answers for user queries.

Cross-Platform Mobile App Development

Flutter Development

Flutter & Dart Mobile Solutions

- Built smooth cross-platform mobile interfaces utilizing Flutter and Dart for Android & iOS.
- Connected frontend mobile apps with custom Node.js / Express REST APIs for real-time data sync.

🎓 EDUCATION

B.E. in Electronics & Communication (ECE)
Government College of Engineering & Technology (GCET), Jammu
Graduated: 2019

12th Grade (Senior Secondary)
Non-Medical Stream
Percentage: 83%

📚 SKILLS EXPANSION

Currently diving deeper into advanced software engineering domains to continuously raise my technical ceiling:

- Advanced Vector Database Optimization (Pinecone/Qdrant)
- Multi-Agent Systems & Autonomous AI Pipelines
- Scalable Microservices & Docker Deployment
